The Lenbrook Health Clinic. A wellness resource center. [1]

Life at Lenbrook is all about feeling your best. And the convenient, on-site Clinic makes it easy for residents to optimize and keep tabs on their health.

The Lenbrook Clinic focuses on preventative care and is a valuable resource center for guidance and information. It is staffed by experienced nurses who provide wellness and disease prevention education and health monitoring. They can treat minor aches and pains and triage bigger health issues so the resident is directed to the proper form of care. These well-trained professionals keep track of residents' health histories and medications and work in collaboration with personal physicians. They can also be a resident's health concierge, finding the right type of doctor and scheduling appointments.

In addition, residents can walk into the Clinic for routine services such as:

- Blood pressure checks
- Medication management
- Vital sign check
- Routine lab services
- On-site mobile x-ray with same day service
- Annual flu vaccine
- First aid
- Annual health assessment, which includes both the resident and the functionality of their residence to match their health needs.

Lenbrook also brings in outside medical providers such as a:

- Ophthalmologist
- Audiologist
- Podiatrist and foot specialist nurse
- Dentist
